

## CSE 111 – Database Systems

### Team Evaluation

Grade each team member, including yourself, on a scale from 1 to 15 (1 is the lowest and 15 is the highest). Consider the participation each team member had in each of the project stages. Try to be as objective as possible.

Team member	DB design (1-15)	DB implementation (1-15)	Application development (1-15)	Presentation & demo (1-15)	Overall participation (1-15)
Andrew lara kane	15	15	15	15	15
Stephen	15	15	15	13	15

Using the same scale from 1 to 15, evaluate how proficient you are on the following teamwork skills:

- resolve conflicting design ideas (1-15) 15
- delegate responsibilities fairly between team members (1-15) 15
- complete your assigned tasks on time (1-15) 15

1. What are the most important things you learned about working in a team?

What i learned the most i to always get stuff on time done to progress faste and prepare for any bug or issues that may need fixing later on

2. What are the most important challenges of working in a team that you encountered? How did you solve these challenges?

Mostly getting stuff on time and gathering information for the project. Since it was my first time learning python i constntly search for solutions on the internet.

3. If you would have to do the project again, would you choose the same team?

Yea i mean i liked working on the project and working with him has been pretty helpful gathering info on the project.

4. Provide any other comments about your team project experience.

It was a lot of time and work but i manage to get the work done and as i work on the coding my partner added as much information to the database to test out and was an interesting user to test my coding on
